

Yunze (Figo) Li

Kitchener, ON, Canada | figoli925@gmail.com | +1 (365) 992-5952 | linkedin.com/in/yunze

Education

Master of Engineering, Electrical and Computer Engineering

Sep 2025 – Dec 2026

University of Waterloo, Waterloo, ON (GPA: 3.9 / 4.0)

Bachelor of Applied Science, Honours Computer Science Co-op

Sep 2020 – Jun 2025

Minor in Probability and Statistics for Engineering

McMaster University, Hamilton, ON (GPA: 3.7 / 4.0)

Experience

Redmesh (China) - Data Engineer & Power BI Technical Consultant

Aug 2023 - Aug 2024

Client: Bosch (China) Investment Ltd.

Suzhou, China

- Developed and deployed Python automation components and Azure-based workflows to synchronize data across internal systems, improving consistency between business and infrastructure teams.
- Built distributed processing workflows in Azure Synapse and parallelized execution paths to handle millions of records daily with reliable, scalable processing.
- Implemented Kafka-based asynchronous messaging between analytics services and applied RBAC and API-token authentication to protect services and sensitive data.
- Created CI/CD workflows with GitHub Actions and Docker to automate validation, testing, and deployment, improving release consistency across environments.
- Diagnosed distributed-system bottlenecks with global infrastructure teams, reducing mean time to recovery by 30% and improving service uptime.
- Optimized PySpark schema design and caching strategies, improving query performance by 40% for downstream applications and reporting services.

Beijing Olym Tiancheng Technology - Software Automation Testing Intern

Jun 2020 - May 2021

IoT Data Analytics Platform

Beijing, China

- Supported the design and validation of a patented IoT software platform for gas equipment, verifying accurate telemetry collection and stable application behavior.
- Built automated API, integration, and regression tests with JUnit, Postman, and Python, reducing manual testing time by 40% while expanding test coverage.
- Identified and fixed defects through root-cause analysis and coordinated fixes with developers and project managers, accelerating delivery by 25% and reducing recurring issues by 15%.

Projects

Gin Rummy, With a Twist | *Spring Boot, PostgreSQL, Next.js, Redux, WebSockets, GCP*

Sep 2024 - May 2025

- Designed and developed a full-stack multiplayer card game with a dozenal scoring system, using a Spring Boot backend and Next.js/Redux frontend deployed on Google Cloud Run.
- Implemented RESTful APIs and WebSocket communication for low-latency game-state synchronization, achieving sub-100 ms response times during concurrent gameplay.
- Designed PostgreSQL schemas for user sessions, leaderboards, and game analytics, improving query throughput by 40% through schema and query optimization.
- Conducted load testing on GCP Compute Engine and contributed to GCP Cloud Build CI/CD workflows for automated testing and deployment.

Lychee Nutrition App | *Python, Django, LangChain, GCP, Vertex AI, RAG*

May 2023 - Sep 2024

- Built and deployed a Django/LangChain nutrition assistant on GCP, creating backend workflows to clean, normalize, and embed nutrition data for retrieval and model serving.
- Integrated Vertex AI Vector Search with GPT-based reasoning to implement retrieval-augmented generation, improving answer accuracy by 35% on domain-specific evaluation queries.
- Added entity extraction, intent classification, and similarity-based recommendation logic for personalized meal plans; monitored service performance with GCP Cloud Monitoring.

Technical Skills

Languages: Java, Python, TypeScript, C, C++, C#, SQL, HTML/CSS

Frameworks: Spring Boot, Django, Node.js, Express.js, React, Next.js, Redux, Angular

Databases & Cloud: PostgreSQL, MySQL, MongoDB, Azure SQL, GCP, Azure, AWS

Developer Tools: Docker, Kubernetes, GitHub Actions, GCP Cloud Build, Git, JUnit, Postman

Software Engineering: REST APIs, WebSockets, distributed systems, event-driven architecture, CI/CD, Agile/Scrum
